

# eNBio-Mas / High-Speed Matching Solution

eNBio-MAS is an authentication server solution for enhancing the security to prevent unjustifiable use of biometric information. World top ranked algorithm and superior server development technology make server scalability easier, so it can be used any fingerprint authentication system from small-scale to large-Scale

## Solution Configuration

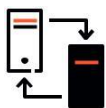

## Features

**Server scalability**  
- Easy to add authentication server

**Role allocation of server**  
- DP : Load balancing between the servers Execution of command Monitoring of server conditions  
- AU : Authentication server  
1:1 Verification  
Rapid 1:N Authenticaiton  
- DM : Data management in DBMS

**Interoperability with other systems**  
- Easily interoperable with other systems

## Requirement

<b>OS</b>	Windows 2008 Server 64 Bit
<b>DBMS</b>	MS SQL 2008 or higher
<b>CPU</b>	i7 or higher
<b>Memory</b>	4 GByte or higher
